

Automating File Copying and Renaming in Python!

Change all the “.v” files in a folder, rename them with “.sv” and copy and move them to a new folder 

This script should take care of:

- ✓ Finding all .v files in a directory
- ✓ Renaming .v files to .sv (SystemVerilog)
- ✓ Copying them to a new destination, ensuring a clean and organized structure

How It should Works

- 1 Finds all .v files in the source directory.
- 2 Replaces .v with .sv in filenames.
- 3 Creates the destination folder (if it doesn't exist).
- 4 Copies and overrides files in the destination.
